

Thank you very much for buying our company’s sewing machine. Before using your new machine, please read the safety instructions below and the explanations given in the instruction manual.

With industrial sewing machines, it is normal to carry out work while positioned directly in front of moving parts such as the needle and thread take-up lever, and consequently there is always a danger of injury that can be caused by these parts. Follow the instructions from training personnel and instructors regarding safe and correct operation before operating the machine so that you will know how to use it correctly.

SAFETY INSTRUCTIONS

1. Safety indications and their meanings

This instruction manual and the indications and symbols that are used on the machine itself are provided in order to ensure safe operation of this machine and to prevent accidents and injury to yourself or other people.

The meanings of these indications and symbols are given below.

Indications

	CAUTION
The instructions which follow this term indicate situations where failure to follow the instructions could cause injury when using the machine or physical damage to equipment and surroundings.	

Symbols

..... This symbol(△)indicates something that you should be careful of. The picture inside the triangle indicates the nature of the caution that must be taken.

..... (For example, ⊘ the symbol at left means "beware of injury".)

..... This symbol (⊘) indicates something that you must not do.
This symbol (●) indicates something that you must do. The picture inside the circle indicates the mature of the thing that must be done.
(For example, the symbol at left means "you must make the ground connection".)

2. Notes on safety

DANGER

Wait at least 5 minutes after turning off the power switch and disconnecting the power cord from the wall outlet before opening the face plate of the control box. Touching areas where high voltages are present can result in severe injury.

CAUTION

Environmental requirements

Use the sewing machine in an area which is free from sources of strong electrical noise such as high – frequency welders.
Sources of strong electrical noise may cause problems with correct operation.

Any fluctuations in the power supply voltage should be within $\pm 10\%$ of the rated voltage for the machine.
Voltage fluctuations which are greater than this may cause problems with correct operation.

The power supply capacity should be greater than the requirements for the sewing machine's electrical consumption.
Insufficient power supply capacity may cause problems with correct operation.

The ambient temperature should be within the range of 5°C to 35°C during use.
Temperatures which are lower or higher than this may cause problems with correct operation.

The relative humidity should be within the range of 45% to 85% during use, and no dew formation should occur in any devices.
Excessively dry or humid environments and dew formation may cause problems with correct operation.

Avoid exposure to direct sunlight during use.
Exposure to direct sunlight may cause problems with correct operation.

In the event of an electrical storm, turn off the power and disconnect the power cord from the wall outlet.
Lightning may cause problems with correct operation.

Installation

Machine installation should only be carried out by a qualified technician.

Contact your dealer or a qualified electrician for any electrical work that may need to be done.

The sewing machine weighs more than 41 kg. The installation should be carried out by two or more people.

Do not connect the power cord until installation is complete. The machine may operate if the treadle is depressed by mistake, which could result in injury.

Turn off the power switch before inserting or removing the plug, otherwise damage to the control box could result.

Be sure to connect the ground. If the ground connection is not secure, you run a high risk of receiving a serious electric shock, and problems with correct operation may also occur.

When securing the cords, do not bend the cords excessively or fasten them too hard with staples, otherwise there is the danger that fire or electric shocks could occur.

If using a work table which has casters, the casters should be secured in such a way so that they cannot move.

Use both hands to hold the machine head when tilting it back or returning it to its original position. If only one hand is used, the weight of the machine head may cause your hand to slip, and your hand may get caught.

Be sure to wear protective goggles and gloves when handling the lubricating oil and grease, so that they do not get into your eyes or onto your skin, otherwise inflammation can result.
Furthermore, do not drink the oil or eat the grease under any circumstances, as they can cause vomiting and diarrhea.
Keep the oil out of the reach of children.

CAUTION

Sewing

This sewing machine should only be used by operators who have received the necessary training in safe use beforehand.

The sewing machine should not be used for any applications other than sewing.

Be sure to wear protective goggles when using the machine.

If goggles are not worn, there is the danger that if a needle breaks, parts of the broken needle may enter your eyes and injury may result.

Turn off the power switch at the following times.

The machine may operate if the treadle is depressed by mistake, which could result in injury.

- When threading the needle
- When replacing the bobbin and needle
- When not using the machine and when leaving the machine unattended.

If using a work table which has casters, the casters should be secured in such a way so that they cannot move.

Attach all safety device before using the sewing machine.

If the machine is used without these devices attached, injury may result.

Do not touch any of the moving parts or press any objects against the machine while sewing, as this may result in personal injury or damage to the machine.

Use both hands to hold the machine head when tilting it back or returning it to its original position. If only one hand is used, the weight of the machine head may cause your hand to slip, and your hand may get caught.

If an error occurs in machine, or if abnormal noises or smells are noticed, immediately turn off the power switch. Then contact your nearest dealer or a qualified technician.

If the machine develops a problem, contact your nearest dealer or a qualified technician.

Cleaning

Turn off the power switch before carrying out cleaning. The machine may operate if the treadle is depressed by mistake, which could result in injury.

Use both hands to hold the machine head when tilting it back or returning it to its original position. If only one hand is used, the weight of the machine head may cause your hand to slip, and your hand may get caught.

Be sure to wear protective goggles and gloves when handling the lubricating oil and grease, so that they do not get into your eyes or onto your skin, otherwise inflammation can result.

Furthermore, do not drink the oil or eat the grease under any circumstances, as they can cause vomiting and diarrhea.

Keep the oil out of the reach of children.

3.Warning labels.

The following warning labels appear on the sewing machine.

Please follow the instructions on the labels at all times when using the machine. If the labels have been removed or are difficult to read, please contact your nearest dealer.

safety devices:
(A) Finger guard
(B) Thread take-up cover

1. NAMES OF MAJOR PARTS

- 1. Bobbin winder
- 3. Quick reverse(Actuator)
- 5. Control box
- 7. Oil gauge window
- 9. Cotton stand

- 2. Lifting lever
- 4. Presser foot
- 6. Knee lifter assembly
- 8. Machine pulley

Safety devices

- 10. Thread take-up cover
- 11. Finger guard

2.INSTALLATION

CAUTION

Machine installation should only be carried out by a qualified technician.

Contact your dealer or a qualified electrician for any electrical work that may need to be done.

The sewing machine weighs more than 41kg. The installation should be carried out by two or more people.

Do not connect the power cord until installation is complete. The machine may operate if the treadle is depressed by mistake, which could result in injury.

Use both hands to hold the machine head when tilting it back or returning it to its original position. If only one hand is used, the weight of the machine head may cause your hand to slip, and your hand may get caught.

About the machine set-up location

- Do not set up this sewing machine near other equipment such as televisions, radios or cordless telephones, otherwise such equipment may be affected by electronic interference from the sewing machine.
- The sewing machine should be plugged directly into an AC wall outlet. Operation problems may result if extension cords are used.

Carrying the machine

- The machine should be carried by the arm by two people as shown in the illustration.
- * Hold the motor cover (A) by hand also so that the pulley does not rotate.

Tilting back the machine head

- Hold section (B) with your foot so that the table does not move, and then push the arm with both hands to tilt back the machine head.

Returning the machine head to the upright position

- clear away any tools, etc. which may be near the table holes.
- While holding the face plate with your left hand, gently return the machine head to the upright position with your right hand.

2-1. Table processing diagram

The top of the table should be 40 mm in thickness and should be strong enough to hold the weight and with-stand the vibration of the sewing machine.

Drill holes as indicated in the illustration below.

2-2. Installation

1. Control box
- (1) control box
- (2) Screws [4 pcs]

2.Oil pan

- (1) Head cushions (left) [2 pcs]
- (2)Head cushions (right) [2 pcs]
- (3) Oil pan.

3.Rubber cushions

- (1)Rubber cushions[2 pcs]

- ## 4.Knee lifter complying bar
- (2) Knee lifter complying bar

5.Machine head

- (1) Hinges [2 pcs]
- (2) Machine head
- (3) Head rest

NOTE:

Tap the head rest (3) securely into the table hole. If the head rest (3) is not pushed in as far as it will go, the machine head will not be sufficiently stable when it is tilted back.

6. Sticker (Remove)

- (1) sticker

7. Cotton stand

(1) cotton stand

NOTE:

Securely tighten the nut (4) so that the rubber gasket (2) and the washer (3) are securely clamped and so that the cotton stand (1) does not move.

<Knee lifter adjustment>

1. Turn the machine pulley so that the feed dog is below the top of the needle plate.
2. Lower the presser foot (5) by using the lifting lever (4).

8. Knee lifter plate

(1) Knee lifter plate

(2) Bolt

* Loosen the bolt (3) and move the knee lifter plate (1) to a position where it is easy to use.

3. Loosen the nut (6).
4. Turn the screw (8) to adjust so that the amount of play in the knee lifter (7) is approximately 2 mm when the knee lifter plate (1) is gently pressed.
5. Securely tighten the nut (6)
6. loosen the nut (9)
7. Turn the screw (10) until the distance between the end of the screw (10) and the knee lifter (11) is approximately 8 mm.
8. Turn the adjusting screw (10) to adjust so that the presser foot (5) is at the desired position within a distance of 13 mm of the needle plate when the knee lifter plate (1) is fully pressed.
9. After adjustment is completed, securely tighten the nut (9).

2-3. Lubrication

CAUTION

Do not connect the power cord until lubrication has been completed, otherwise the machine may operate if the treadle is depressed by mistake, which could result in injury.

Be sure to wear protective goggles and gloves when handling the lubricating oil and grease, so that they do not get into your eyes or onto your skin, otherwise inflammation can result.

Furthermore, do not drink the oil or eat the grease under any circumstances, as they can cause vomiting and diarrhea.

Keep the oil out of the reach of children.

- The sewing machine should always be lubricated and the oil supply replenished before it is used for the first time, and also after long periods of non-use.
- Use only the lubricating oil our company.

1. Remove the rubber cap (1), and pour 130 ml of lubricating oil from the accessory oil bottle (2) into the oil tank (3)
(Use the reference line (4) as a guide when pouring)
 2. Replace the rubber cap (1)
 3. Check that the oil gauge (4) comes to the upper reference line in the oil gauge window (3)
- * Be sure to add more oil if the oil gauge (4) is below the lower reference line.

2-4. Test operation (Operating the treadle)

CAUTION

Do not touch any of the moving parts or press any objects against the machine while sewing, as this may result in personal injury or damage to the machine.

<Turning on the power>

Press the ON power switch (1)

The power indicator (2) will illuminate.

<Test operation >

1. Check that the machine sews at low speed when the treadle (3) is gently pressed to position (B).
2. Then check that it sews at high speed when the treadle (3) is gently pressed to position (C).
3. After pressing the treadle (3) forward, check that the needle is lowered to the needle plate when the treadle (3) is returned to the neutral position (A).
(when needle down stopping has been set.)
4. If the treadle (3) is pressed to position (D), thread trimming is carried out and the needle then rises above the needle plate and stops.

3. PREPARATION BEFORE SEWING

3-1. Installing the needle

CAUTION

Turn off the power switch before installing the needle.

The machine may operate if the treadle is depressed by mistake, which could result in injury .

1. turn the machine pulley to move the needle bar to its highest position.
2. Loosen the screw (1).
3. Insert the needle (2) in a straight line as far as it will go, making sure that the long groove on the needle is at the left, and then securely tighten the screw(1).

3-2. Removing the bobbin case

CAUTION

Turn off the power switch before removing the bobbin case.

The machine may operate if the treadle is depressed by mistake, which could result in injury .

1. Turn the machine pulley to raise the needle until it is above the needle plate.
 2. Pull the latch (1) of the bobbin case upward and then remove the bobbin case.
 3. The bobbin (2) will come out when the latch (1) is released .
- * There is an anti-spin spring(3) inside the bobbin case . the anti-spin spring(3) prevents the bobbin from racing at times such as during thread trimming.

3-3. Winding the lower thread

CAUTION

Do not touch any of the moving parts or press any objects against the machine while the lower thread, as this may result in personal injury or damage to the machine.

1. Turn on the power switch.
 2. Place the bobbin (1) onto the bobbin winder shaft(2).
 3. Follow the instruction of arrow, clamp the thread between the knife (4) and winding plate.
 4. Push the bobbin presser arm(3) toward the bobbin (1).
 5. Raise the presser foot with the lifting lever .
 6. Depress the treadle. Lower thread winding will then start.
 7. Once winding of the lower thread is completed, the bobbin presser arm (3) will return automatically.
 8. After wind the bobbin thread, take out the bobbin, clamp the thread between the knife (4) and winding plate, cut the thread with the knife.
- * Loosen the screw (5) and mover the thread cutter(4) to adjust the amount of thread wound onto the bobbin.

NOTE:

The amount of thread wound onto the bobbin should be a maximum of 80% of the bobbin capacity.

3-4. Installing the bobbin case

CAUTION

Turn off power switch before installing the bobbin case.

The machine may operate if the treadle is depressed by mistake , which could result in injury.

1. Turn the machine pulley to raise the needle until it is above the needle plate.
2. While holding the bobbin so that the thread winds to the right, insert the bobbin into the bobbin case.
3. Pass the thread through the slot (1) and under the tension spring (2), and then pull it out from the thread guide(3).
4. Check that bobbin turns clockwise when the thread is pulled.
5. Hold the latch (4) on the bobbin case and insert the bobbin case into the rotary hook.

3-5. Threading the upper thread

CAUTION

Turn off the power switch before threading the upper thread.

The machine may operate if the treadle is depressed by mistake. Which could result in injury.

Turn the machine pulley and raise the thread take-up (1) before threading the upper thread.

This will make threading easier and it will prevent the thread from coming out at the sewing start.

3-6. Using the knee lifter

The presser foot (2) can be raised by pressing the knee lifter plate(1).

4. SEWING

CAUTION

Attach all safety devices before using the sewing machine. If the machine is used without these devices attached, injury may result.

Turn off power switch switch at the following times.

The machine may operate if the treadle is depressed by mistake, which could result in injury.

- When threading the needle.
- When replacing the bobbin and needle
- When not using the machine and when leaving the machine unattended.

Do not touch any of the moving parts or press any objects against the machine while sewing , as this may result in personal injury or damage to the machine.

Use both hands to hold the machine head when tilting it back or returning it to its original position. If only one hand is used, the weight of the machine head may cause may cause your hand to slip. and your hand may get caught.

4-1. Sewing

NOTE: Before use, remove the protective film on the touch screen.

1. press the ON power switch (1).
The power indicator (2) will illuminate.
2. Use the operating panel to carry out the programming which is necessary for sewing .
(Refer to the chapter on using the operating panel.)
3. Depress the treadle to start sewing.

4-2. Sewing condensed stitches

- Before sewing, set up button (1) with the function of dense seam through the touch screen.
- Before sewing, set up stitch length through the touch screen.

5. THREAD TENSION

5-1. Adjusting the thread tension

Turn off the power switch before removing or inserting the bobbin case.
The machine may operate if the treadle is depressed by mistake, which could result in injury.

Good even stitches.

← Upper thread
← Lower thread

Upper thread tension too weak or lower thread tension too strong.

→ Increase the upper thread tension.
Decrease the lower thread tension.

Upper thread tension too strong or lower thread tension too weak.

→ Decrease the upper thread tension.
Increase the lower thread tension.

< Lower thread tension >

Adjust by turning the adjustment screw (1) until the bobbin case drops gently by its own weight while the thread end coming out of the bobbin case is held.

<Upper thread tension>

After the lower thread tension has adjusted, adjust the upper thread tension so that a good, even stitch is obtained.

1. Fix the screw (1) to the release electromagnet, the picture shows the size.
2. Tighten nut (3).
3. Lower the presser foot.
4. Turn the thread tension nut (2) to adjust.

5-2. Adjusting the presser foot pressure

Correct stitches

 Upper thread

 Skipped stitches occur

 Uneven stitch length

→ Increase the pressure

 Stitches are puckered

→ Decrease the pressure

The presser foot pressure should be as weak as possible, but strong enough so that the material does not slip.

1. Loosen the adjusting nut (1).
2. Turn the presser adjusting screw (2) to adjust the presser foot pressure.
3. Tighten the adjusting nut (1).

5-3. Adjusting the trailing length after thread trimming

- At the time of thread trimming, the thread tension is loosened and tension is applied by the pretension (1) only.
- The standard trailing length for the upper thread is 35–40 mm.
- If the tension of the pretension (1) is increased, the lengths of the threads trailing from the needle tips will be reduced; if the tension is reduced, the lengths will be increased.

Adjust by turning the pretension(1).

6. CLEANING

CAUTION

Turn off the power switch before carrying out cleaning.

The machine may operate if the treadle is depressed by mistake, which could result in injury.

Be sure to wear protective goggles and gloves when handling the lubrication oil and grease, so that they do not get into your eyes or onto your skin, otherwise inflammation can result.

Furthermore, do not drink the oil or eat the grease under any circumstances, as they can cause vomiting and diarrhea.

Keep the oil out of the reach of children.

Use both hands to hold the machine head when tilting it back or returning it to its original position, if only one hand is used, the weight of the machine head may cause your hand to slip, and your hand may get caught.

6-1. Daily cleaning procedures

The following cleaning operations should be carried out each day in order to maintain the performance of this machine and to ensure a long service life.

Furthermore, if the sewing machine has not been used for a long period of time, carry out the following cleaning procedures before using it again.

1. Cleaning

1. Raise the presser foot.
2. Remove the two screws (1), and then remove the needle plate (2).
3. Use a soft wire brush to clean any dust from the feed dog (3).
4. Install the needle plate (2) with the two screws (1).
5. Tilt back the machine head.
6. Remove the bobbin case (4).
7. Wipe off any dust from the rotary hook (5) with a soft cloth, and check that there is no damage to the rotary hook (5).
8. Remove the bobbin from the bobbin case (4) and clean the bobbin case (4) with a cloth.
9. Insert the bobbin into the bobbin case (4) and then place the bobbin case (4) back into the machine.

2. Lubrication

A. Gearbox oil quantity

NOTE:

•Check the quantity of oil in the gearbox immediately after tilting back the machine head.

When the machine head is left for long periods in the tilted-back position, the amount of oil in the felt inside the gearbox drops and the oil level seen from the oil windows (1) rises, so that it becomes impossible to measure the actual oil level accurately.

•The position of the oil level in the oil window (1) will vary depending on the angle of the machine head.

Tilt back the machine head while the head rest (2) is installed in the correct position as shown in the table processing diagram.

<Checking the oil quantity>

The oil level should normally be approximately 1 mm above the center reference line in the oil window (1). (70 ml of lubricating oil is added to the gearbox at the time of shipment from the factory.)

1. Look at the oil window (1) from directly in front.
2. If the oil level is below the normal level, add more lubricating oil as described in the following procedure.

<Lubrication>

Use only the lubricating oil specified by our company.

1. Remove the rubber cap (3).
2. Add lubricating oil until the oil level is approximately 1 mm above the center reference line in the oil window (1).
Do not pour all of the lubricating oil in at once at this time.
Pour the lubricating oil 10 ml at a time while checking the oil window (1).

NOTE:

Do not pour too much lubricating oil into the specified location.

If too much oil is added oil leaks may result.

3. Insert the rubber cap (3) securely.

4. Return the machine head to its original position.

NOTE:

The rubber cap (3) has a hole in it for adjusting the air pressure.

When replacing the rubber cap (3) use only the replacement part specified by our company.

B. Oil tank oil quantity.

Check the oil gauge window (1), and add more oil if the oil gauge (2) is below the lower reference line.

3. Checking

1. Replace the needle if it is bent or if the tip is broken.
2. Check that the upper threads have been threaded correctly.
3. Carry out a test sewing.

6-2. Applying grease

<Applying grease>

Use our company specified grease.

1. Turn the power switch to "OFF"
2. Remove the screws and the set screws.
3. Apply grease to each of the holes until the grease overflows slightly.
4. Tighten the screws and the set screws in order to push the grease in.
5. Turn the machine pulley by hand to move the needle bar up and down several times in order to disperse the grease.
6. Use a cloth to wipe away any excess grease from around the screws and set screws and from underneath needle bar bush D.
7. Carry out the reset procedure given below.

7. ADJUSTING THE ROTARY HOOK LUBRICATION AMOUNT

CAUTION

Be careful not to touch your fingers or the lubrication amount check sheet against moving parts such as the rotary hook or the feed mechanism when checking the amount of oil supplied to the rotary hook, otherwise injury may result.

Use the following procedure to check the amount of oil being supplied to the rotary hook when replacing the rotary hook or when changing the sewing speed.

<Checking the lubrication amount>

1. Remove the thread from all points from the thread take-up to the needle.
2. Use the lifting lever to lift the presser foot.
3. Run the machine at the normal sewing speed for approximately 1 minute without sewing any material (following the same start/stop pattern as when actually sewing).
4. Place the lubrication amount check sheet (1) underneath the rotary hook (2) and hold it there. Then run the sewing machine at the normal sewing speed for 8 seconds. (Any type of paper can be used as the lubrication amount check sheet (1).)
5. Check the amount of oil which has spattered onto the sheet.

If adjustment is necessary, carry out the following operations in "Adjusting the lubrication amount".

Note:

If the lubrication amount does not match the correct amount shown in the illustration at left (if the amount of spattered oil is too much or none at all), turn the adjusting screw (3) clockwise to fully tighten it, turn it back counterclockwise by 2 1/2 turns, and then carry out the following adjustment.

<Adjusting the lubrication amount>

1. Tilt back the machine head.
 2. Turn the adjusting screw (3) to adjust the lubrication amount.
- If the rotary hook adjusting screw (3) is turned clockwise, the lubrication amount becomes greater.
 - If the rotary hook adjusting screw (3) is turned counterclockwise, the lubrication amount becomes smaller.
3. Check the lubrication amount again according to the procedure given in "Checking the lubrication amount" above.
 - * Turn the adjusting screw (3) and check the lubrication amount repeatedly until the lubrication amount is correct.
 4. Check the lubrication amount again after the sewing machine has been used for approximately two hours.

8. STANDARD ADJUSTMENTS

CAUTION

Maintenance and inspection of the sewing machine should only be carried out by a qualified technician.

Ask your dealer or a qualified electrician to carry out any maintenance and inspection of the electrical system.

If any safety devices have been removed, be absolutely sure to re-install them to their original positions and check that they operate correctly before using the machine.

Use both hands to hold the machine head when tilting it back or returning it to its original position. If only one hand is used, the weight of the machine head may cause your hand to slip, and your hand may get caught.

Turn off the power switch and disconnect the power cord from the wall outlet at the following times, otherwise the machine may operate if the treadle is depressed by mistake, which could result in injury.

- When carrying out inspection, adjustment and maintenance

- When replacing consumable parts such as the rotary hook and knife

If the power switch needs to be left on when carrying out some adjustment, be extremely careful to observe all safety precautions.

8-1. Adjusting the thread take-up spring

<Thread take-up spring position>

The standard position of the thread take-up spring (1) is 6~8mm [4~6mm for H specifications] above the surface of the thread guide (3) when the presser foot (2) is lowered.

1. Lower the presser foot (2).
2. Loosen the set screw (4).
3. Turn the thread tension bracket (5) to adjust the spring position.
4. Securely tighten the set screw (4).

<Thread take-up spring tension>

The standard tension of the thread take-up spring (1) varies in accordance with the machine specifications as shown in the table.

M	0.25~0.35N
H	0.30~0.5N

1. Push the needle thread with your finger until it is slightly higher than the thread tension bracket (5) and so that the upper thread is not pulled out.
2. Pull the upper thread down until the thread take-up spring (1) is at the same height as the base of the thread guide (3), and then measure the tension of the thread take-up spring (1).
3. Insert a screwdriver into the slot of the tension stud (6), and turn the screwdriver to adjust the tension of the thread take-up spring (1).

NOTE:

If using the tension gauge (7) (sold separately) to measure the tension, take the reading from the scale on the side of the red line.

8-2. Adjusting arm thread guide R

The standard position of arm thread guide R (1) is the position where the screw (2) is in the center of the adjustable range for arm thread guide R(1).

To adjust the position .loosen the screw (2) and then move arm thread guide R(1).

- When sewing thick material ,move arm thread guide R(1) to the left ,(The thread take-up amount will be come greater.)
- When sewing thin material, move arm thread guide R(1) to the right .(The thread take-up amount will become less.)

8-3. Adjusting the presser foot height

The standard height of the presser foot (1) is 6mm when the presser foot (1) is raised by means of the lifting lever (2).

1. Loosen the nut (3) of the adjustment screw (4),and then turn the adjustment screw(4)so that there is no pressure applied to the presser foot .
2. Raise the lifting lever (2). The presser foot (1) will also rise.
3. Remove the oil cap (5).
4. Loosen the screw (6) and then move the presser bar (7) up or down until the presser foot (1) is at the standard height of 6mm .
5. Tighten the screw(6) .
6. Replace the oil cap (5).
7. Adjust the presser foot pressure using the adjustment screw (4),and then tighten the nut (3).
8. After switch on machine, lower the presser foot and turn the hand wheel, the system will set up the zero position of presser foot height detection automatically as the lowest position of presser foot during turning.

8-4. Adjusting of the feed dog height

The standard height of the feed dog (1) when it is at its maximum height above the top of the needle plate is 1.0 mm for M specifications, and 1.2mm for H specifications.

1. Turn the pulley until the feed dog (1) rises to the highest position.
 2. Tilt back the machine head .
 3. Loosen the screw (2).
 4. Turn the feed lifting rock bracket stud (3) within a range of 90° from the reference line (4) to adjust the vertical height of the feed bar (5)(Fig.[A])
 5. Tighten the screw (2).
- If you are worried about the angle of the feed dog (1), turn the shaft (6) while carrying out the above adjustment ,(Fig.[B])

8-5 .Adjusting the feed dog angle

The standard angle of the feed dog (1) on the top of needle plate is subject to the O mark (or V mark) on the cloth feeding short-axis (2) coincidence with the mark on parallel cloth feeding bracket, the feed dog(1) is paralleling with the needle plate

1. Turn the machine pulley forward to raise the feed dog (1) from its lowest position until it is flush with the top of the needle plate ,and stop turning the pulley at that point.

2. Tilt back the machine head.

3. Loosen the two set screws(4).

4. Turn the shaft (2) in the direction of the arrow within a range of 90° with respect to the standard position (Fig.[C])

* In order to prevent puckering , lower the front of the feed dog(1)

* In order to prevent puckering the material from slipping, raise the front of the feed dog(1)

5. Securely tighten the set screws(4).

* If you would like to tilt the feed dog (1) further, turn the feed lifting rock bracket stud (5) while carrying out the above adjustment.(Fig.[D])

* The height of the feed dog (1) will change after the angle has been adjusted, so it will be necessary to readjust the height of the feed dog(1).

8-6. Adjusting the needle bar height

Adjust so that the distance from needle bar mounting surface A to the bottom edge of needle bar bushing (2) is the same as the height of surface B on the <1> side of the accessory timing gauge (2) when the needle bar (1) is at its lowest position as shown in the illustration.

1. Turn the machine pulley to set the needle bar (1) to its lowest position.
2. Remove the rubber cap (3) from the face plate.
3. Loosen screw (4) to adjust the needle bar(1) .
4. Securely tighten the screw(4).
5. Install the rubber cap (3).

8-7. Adjusting the needle and feed mechanism timing

The standard timing is for the tip of the needle to be in the position given below when the machine pulley is turned forward to raise the feed dog(1) from its lowest position until it is flush with the top of the needle plate(2).

(At this time, the "—" mark on the lower shaft will be aligned with the center of the scale (4) ("O" mark) on the vertical cam (3).

<M> There is gap of approximately 1mm between the tip of the needle and the top of the needle plate(2).

<H > There is gap of approximately 3mm between the tip of the needle and the top of the needle plate(2).

1. Tilt back the machine head.
2. Loosen the two set screws (5), and then turn the vertical cam(3) slightly to adjust the timing.

* If transferred to standard, rotating the eccentric (3) to make the mark (O) with the mark (-). (Fig.[A])

* In order to prevent overlapping stitching when the fabric is inconsistent [suture sub], the machine needle timing adjustment later. (Upper and lower eccentric (3) to (B) the direction of rotation Fig [B])

* In order to close good stitch, can be adjusted earlier machine needle. (Upper and lower eccentric(3) to (C) the direction of rotation Fig [C])

NOTE: The upper and lower eccentric (3) to (C) over the direction of rotation, is caused by Broken Needle reasons.

3. After adjustment is completed, securely tighten the two screws(5).

8-8. Adjusting the needle and rotary hook timing

When the needle bar (1) rose from the lowest position of 1.8mm (H specification is 2.2mm), as shown, baseline (b) with the needle bar bushings (2) to maintain alignment of the lower end, the hook tip (3) and the center of the needle (4) must be consistent.

(At this time, the gap between the upper edge of the needle hole and the rotary hook tip (3) will be 0.5-0.7mm)

1. Turning sewing machine handwheel, so that the needle bar (1) from the lowest up to, as shown in the baseline fig, baseline (b) with the needle bar bushings (2) to maintain alignment of the lower end.
2. Loosen the remaining set screw(5), and align the rotary hook tip(3) with the center of the needle(4). There should be a gap of 0-0.5mm between the rotary hook tip (3) and the needle (4) at the time.
3. Securely tighten the screw(5).

<Checking the clearance between the rotary hook and bobbin case holder position bracket >

Check that the clearance between the rotary hook (8) and the bobbin case holder position bracket (10) is enough to allow the thread being used to pass through smoothly.

The clearance should be 0.4-0.7mm for M models, and 0.6-1.1 mm for H models.

8-9. Adjusting the treadle

<Forward depression sensitivity adjustment >

If the machine starts running at low speed when your foot is simply resting on the treadle, or if the treadle pressure is felt to be too weak, adjust the position (a to c) at which the treadle spring (1) is hooked onto the treadle lever (2).

a is the weakest position and it becomes gradually stronger at b and c respectively.

<Backward depression sensitivity adjustment >

1. Loosen the nut (3) and the bolt (4).

When the bolt (4) is tightened, the treadle operation becomes heavier, and when it is loosened, the operation becomes lighter.

2. Tighten the nut (3).

<Adjusting the treadle stroke>

Remove the nut (5), and then move the connecting rod joint (6) from the position in figure A to the position in figure B. The treadle stroke will then be increased by approximately 27%.

At this time, the treadle forward and backward depression sensitivity will change, so readjust if necessary.

8-10. Adjusting the presser foot floating amount(minute lifting amount)

When sewing stretch materials and materials with long pile , you can make minute adjustments to the floating amount for the presser foot (1)in accordance with the material.

1. Turn the sewing machine pulley by hand to move the feed dog (2)below the needle plate (3).
2. Use the lifting lever to lower the presser foot (1).
3. loosen the nut (4).
4. Use a screwdriver to turn the adjustment screw (5) to adjust the floating amount .
 - To raise the presser foot (1)
Turn the adjusting screw (5) clockwise .
 - To lower the presser foot (1)
Turn the adjusting screw (5) counterclockwise .

5. Tighten the nut (4).

After making the adjustment , sew a piece of material to check the floating amount.

8-11. Adjusting the tangent timing

1.The position of the tangent cam adjustment

Turn the handwheel of sewing machine, when the needle bar from the bottom up 5 mm, hand on a tangent electromagnet (4), Make roller shaft and the cam tangent (1) of the gap in contact, Then use fastening screw (2) to temporary fixation.

Will the tangent electromagnet (4) return to its original position (leave position), loosen the screw move (2),Adjustment tangent cam (1),the space of cam head face and roller shaft head face is 0.6-0.8mm ,Tighten lock screw (2).

【With about 40 kg/cm torque force tightened the screw】

2.Sword and fixed knife position adjustment

Adjust the tangent cam roller (3) and hook side of crank shaft at about 3 mm outside, To tighten the screws (8),Use a hand to mesh electromagnet, Make sure that the maximum amount engagement, The fixed knife (6) front moving across the blade (5) is not more than mouth raised portion .If the mesh is appropriate, should be loosen screws (8),Adjust the tangent cam roller (3) and crank shaft of the hook on the right outside the gap and makes dynamic meshing quantity requirements for the sword of the position, and then screw (8).

【With about 40 kg/cm torque force to tighten the screws】

8-12. Adjusting pick the thread take up the amount

Note:

in addition to M type beyond, do not use this function.

When sewing thick object, if will pick for a large number of thread take up set numerical, the line will be easier to adjust the tension.

1. Dismantling the panel.
2. Remove rubber stopple (1).
3. Use hex wrench (3), Will screw (2) and (3) to loosen 2 weeks.
4. Adjust the amount pick the thread take up line.
< When to increase the pick of the thread take up line >
Will pick the thread take up hinge axis (4) clockwise rotation, make slot (5) just up.
<When need to pick the thread take up line returned to the amount of the standard>
Will pick the thread take up hinge axis (4) according to counterclockwise rotation, make slot (5) just down..
5. The thread take up the challenges hinge axis (4) pushed to the most inside of the state, the first screws (2) twist to pick the thread take up hinge axis (4) of the screw installation on the plane.
6. And then, turn screws (3).
7. Put on rubber stopple (1).
8. Installation on the panel.

8-13. Adjustment of stitch length zero position

1. Turn step motor shaft (1), till the supporting tight plane of the shaft come to motor side with wire (like the right picture, No. (7) is the motor wire), this is the mechanical zero position of the step motor.
2. Turn the switch shaft (2), till the mark line on the shaft become vertical (like the right picture).
3. Turn the hand wheel (3), check if the feed dog (6) only move up and down, if not, turn the switch shaft slightly, till the feed dog (6) only move up and down.
4. Fix the timing belt (4) to the two wheels (5), this is the mechanical zero position of sewing machine.

9. MOBILE APP CONNECTION

Download APP software "TYPICAL", we have two ways to connect with machine:

- (1) Open the software, sweep the camera to register motor cover two-dimensional code, the initial scan code you need to enter the initial password "1234", the next connection can be directly entered, the software can enter the corresponding models, and the upper left corner Bluetooth logo becomes the band logo, the connection is successful.
- (2) Open the software, select the appropriate type directly, scan the nearby Bluetooth devices, find the Bluetooth name (Bluetooth name consistent with serial numbers below the two-dimensional code) of the machine, click the connection, pairing the first time you need to enter the initial password "1234", the upper left corner Bluetooth logo becomes the band logo, the connection is successful.

10.TROUBLESHOOTING

- Please check the following points before calling for repairs or service.
- If the following remedies do not fix the problem, turn off the power switch and consult a qualified technician or the place of purchase.

DANGER

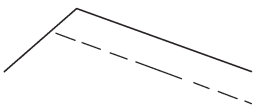

Wait at least 5 minutes after turning off the power switch and disconnecting the power cord from the wall outlet before opening the face plate of the control box. Touching areas where high voltages are present can result in severe injury.

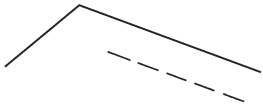

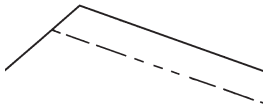

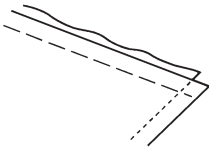

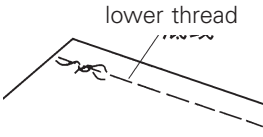

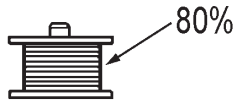

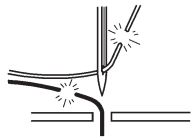

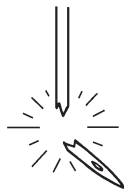

CAUTION

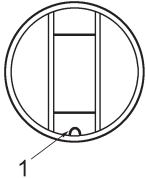

Turn off the power switch and disconnect the power cord before carrying out troubleshooting. The machine may operate if the treadle is depressed by mistake, which could result in injury.

Problem	Possible cause
1.Upper thread is not tight. 	<ul style="list-style-type: none"> ● Is the upper thread tension too weak, or is the lower thread tension too strong? Adjust the upper thread tension or lower thread tension.
2.Lower thread is not tight. 	<ul style="list-style-type: none"> ● Is the lower thread tension too weak, or is the upper thread tension too strong? Adjust the lower thread tension or upper thread tension.
3.Loops appear in seam. 	<ul style="list-style-type: none"> ● Is the thread path not smooth enough? Use a file with a fine grain or sandpaper to polish smooth the thread path. ● Is the bobbin not turning smoothly? Pull out the lower thread to check that there is no slackness in the thread tension, or replace the bobbin or bobbin case.
4.Skipped stitches occur while sewing 	<ul style="list-style-type: none"> ● Is the needle tip bent? Is the needle tip blunt? If the needle tip is bent or broken, replace the needle. ● Is the needle properly installed? If it is incorrect, install the needle correctly. ● Is the machine properly threaded? If it is incorrect, thread the thread correctly. ● Is the presser foot pressure too weak? Adjust the presser foot pressure. ● Is the needle too thin? Replace the needle with a needle that is one rank thicker. ● Is the presser foot too high? Adjust the height of the presser foot. ● Is the thread take-up spring too weak? Adjust the tension of the thread take-up spring.

Problem	Possible cause
<p>5. Skipped stitches at sewing start Thread unravelling at sewing start</p> 	<ul style="list-style-type: none"> ● Is the thread take-up spring tension too strong? Reduce the tension of the thread take-up spring. ● Is the thread take-up spring operating range too large? Lower the position of the thread take-up spring. ● Are the trailing lengths of the upper threads too short after thread trimming? Adjust the pretension. ● Are the threads not being trimmed cleanly? Sharpen the fixed knives, or replace the fixed and movable knives if necessary. ● Is the needle too wide? Try using a needle with a count that is one lower than the current needle. ● Is the length of thread trailing out from the bobbin case after thread trimming too short? If the bobbin is spinning loosely, replace the anti-spin spring in the bobbin case. ● Is the sewing speed too fast at the sewing start? Use the slow start feature.
<p>6. Uneven seam</p> 	<ul style="list-style-type: none"> ● Is the presser foot pressure too weak? Adjust the presser foot pressure. ● Is the feed dog too low? Adjust the feed dog height. ● Is the bobbin scratched? If the bobbin is damaged, smooth it with an oiled grindstone or replace it.
<p>7. Large degree of puckering (excess tension)</p> 	<ul style="list-style-type: none"> ● Is the upper thread tension too strong? Make the upper thread tension as weak as possible. ● Is the lower thread tension too strong? Make the lower thread tension as weak as possible. ● Are the thread take-up spring tensions too strong? Make the thread take-up spring tension as weak as possible. ● Is the thread take-up spring operating range too large? Lower the position of the thread take-up spring to as low a position as possible. ● Is the presser foot pressure too strong? Adjust the presser foot pressure. ● Is the sewing speed too fast? Use the sewing speed control keys to gradually reduce the sewing
<p>8. Material slippage</p> 	<ul style="list-style-type: none"> ● Is the presser foot pressure too strong? Adjust the presser foot pressure.

Problem	Possible cause
<p>9. Lower thread is tangled at the sewing start. Spinning of bobbin during thread trimming</p> 	<ul style="list-style-type: none"> ● Is the bobbin spinning direction correct when the lower thread is being pulled? Set the bobbin so that it turns in the opposite direction to the rotary hook. ● Is there too much thread wound onto the bobbin? The bobbin winding amount should not be more than 80%. ● Is the anti-spin spring attached? Attach the anti-spin spring. ● Is the bobbin turning smoothly? If the bobbin is not turning smoothly, replace the bobbin 
<p>10. Upper and lower threads are breaking.</p> 	<ul style="list-style-type: none"> ● Is the needle bent or is the needle tip broken? Replace the needle if it is bent or broken. ● Is the needle properly installed? If it is incorrect, install the needle correctly. ● Is the machine properly threaded? If it is incorrect, thread the thread correctly. ● Is the rotary hook sufficiently lubricated? If the oil gauge is down to the lower reference line in the oil gauge window, add more oil. ● Is the upper or lower thread tension too weak or too strong? ● Adjust the upper thread or lower thread tension. Is the upper thread may be loose because the thread take-up spring operating range is too small? ● Adjust the position of the thread take-up spring. Is the rotary hook, feed dog or other part damaged? ● If they are damaged, smooth them with an oiled grindstone or replace the damaged parts. ● Is the thread path damaged? If the thread path is damaged, smooth it with sandpaper or replace the damaged part.
<p>11. Incorrect thread trim – ming (Upper and lower threads are both not being trimmed)</p>	<ul style="list-style-type: none"> ● Is the fixed knife or movable knife damaged or worn? Replace the fixed knife or the movable knife.
<p>12. Incorrect thread trim- ming (upper thread or lower thread is not being trimmed)</p>	<ul style="list-style-type: none"> ● Is the needle properly installed? If it is incorrect, install the needle correctly. ● Is the fixed knife or movable knife blunt? Replace the fixed knife or the movable knife.
<p>13. Broken needles</p> 	<ul style="list-style-type: none"> ● Is the material being pushed or pulled with excessive force during sewing? ● Is the needle properly installed? If it is incorrect, install the needle correctly. ● Is the needle bent, is the needle tip broken, or is the needle hole blocked? Replace the needle. <p>Caution</p> <p>• It is extremely dangerous to leave any pieces of broken needle sticking in the material If the needle breaks, search for all pieces until the whole of the needle is found again.</p> <p>• Furthermore, we recommend that through steps be taken to account for such needles to comply with product liability regulations.</p>

Problem	Possible cause
<p>14.Oil gauge (1)is not rising in oil gauge window.</p> 	<ul style="list-style-type: none"> ● Is the oil tank empty? Fill the oil tank with oil.
<p>15.Machine does not operate when power is turned on and treadle is pressed.</p>	<ul style="list-style-type: none"> ● Is the power supply connector disconnected from the control box? Insert the connector securely.
<p>16. Machine does not operate at high speed.</p>	<ul style="list-style-type: none"> ● Is the sewing speed setting or backtack speed setting incorrect? Use the sewing speed control keys to set the high speed.
<p>17. Machine stops during sewing</p>	<ul style="list-style-type: none"> ● Is the fixed stitch key turned on? Press the fixed stitch key so that the indicator turns off. ● Is the power supply voltage too low? Check the power supply. (If the power cord is too long or too many appliances are being run from a single outlet, this may cause voltage drops which will in turn cause the reset function to activate and stop the machine, even if the power supply itself is normal.)
<p>18 .Nothing appears on the operation panel display.</p>	<ul style="list-style-type: none"> ● Is the power supply connector disconnected from the control box? Insert the connector securely. ● Is the operation panel connector inside the control box disconnected? Insert the connector securely.

This technical drawing is an exploded view of a mechanical assembly, showing various components and their assembly relationships. The parts are numbered as follows:

- Part 1:** A large cylindrical component with a flange, shown in an exploded view with sub-components 1-1 through 1-9.
- Part 2:** A complex linkage mechanism with sub-components 2-1 through 2-6.
- Part 3:** A small cylindrical component with a flange.
- Part 4:** A small rectangular component.
- Part 5:** A long, thin cylindrical component.
- Part 6:** A long, thin cylindrical component.
- Part 7:** A small cylindrical component.
- Part 8:** A small cylindrical component.
- Part 9:** A small cylindrical component.
- Part 10:** A small cylindrical component.
- Part 11:** A small cylindrical component.
- Part 12:** A complex gear-like component with sub-components 12-1 through 12-9.
- Part 13:** A small cylindrical component.
- Part 14:** A small rectangular component.
- Part 15:** A small cylindrical component.
- Part 16:** A small rectangular component.
- Part 17:** A long, thin cylindrical component with sub-components 17-1 through 17-3.
- Part 18:** A small cylindrical component.
- Part 19:** A small cylindrical component.
- Part 20:** A gear-like component with sub-components 20-1 and 20-2.
- Part 21:** A small cylindrical component.
- Part 22:** A small cylindrical component.
- Part 23:** A small cylindrical component.
- Part 24:** A small cylindrical component with sub-components 24-1 through 24-3.
- Part 25:** A long, thin cylindrical component.
- Part 26:** A small cylindrical component.
- Part 27:** A small cylindrical component.

The diagram uses dashed boxes to group related components and lines to indicate the assembly sequence and alignment of the parts.

12. QUICK REVERSE SWITCH MECHANISM

No.	Ref.No.	Description	Qt	Note
1	275600000	Integrated switch assy	1	
2	275340000	Circuit board assy	1	
3	B048500294	Screw M5 × 8	3	
4	275330003	Magnet mounting seat	1	
5	022700015	Screw SM3.57–40x11	1	
6	B048600294	Screw M4 × 8	2	

13. PRESSER FOOT LIFTING SET MECHANISM

No.	Ref.No.	Description	Qt	Note
1	B960006009	Screw	5	
2	275310001	Solenoid base L	1	
3	S150216032	Screw	3	
4	275310000	P–foot lifter solenoid assy	1	
5	275310002	Solenoid base R	1	
6	277800003	Pin	1

12-13	B961532080	Bush	2	
12-14	S150503004	Nut M5	4	
14	BX75289089	Knee lifter assy	1	
14-1	B964071089	Knee lifter bracket	1	
14-2	B900647009	Bolt square SM7.94	1	
14-3	BX75280089	Bolt SM5.95x20	1	
14-4	230100022	Knee lifter bar	1	
14-5	022920009	Knee lifter plate	1	
14-6	B996143009	Knee lifter plate stopper	1	
14-7	B990023009	Bolt SM5.95-28x8	1	
14-8	W210105006	Knee lifter plate cover	1	

Machine specifications

Machine's main technical data

		GC6930A-MD3	GC6930A-HD3
Max.sewing speed		5000rpm	4500rpm
Max. stitch length		5mm	
Presser foot height	Lifting lever	6mm	
	Electromagnetic pressure	9mm	
	knee lifter	13mm	
Feed dog height		0.8mm	1.2mm
Needle		DBx1 #11-#16	DPx5 #18-#22

● Besides adjusting stitch, please laypeople don't debug or maintain.

● Parts are subject to changes in design without prior notice.
